

ORIGINAL ITALIAN DOORHANDLES

entra[®]
ITALIAN DOORHANDLES

ENTRA was able to achieve this ambitious goal – one of the very few companies in the world to have done so – by implementing a strategic merger of the two Brescia-based companies. An integrated system of

technology and high level of efficiency has enabled the company to optimise their productive resources and technology to become more competitive and offer an increased range of designs, products and functions. **ENTRA** designs and makes its own dies and uses hot-forging and die casting to form the metal. Grinding and polishing processes use fully automated robots finally a

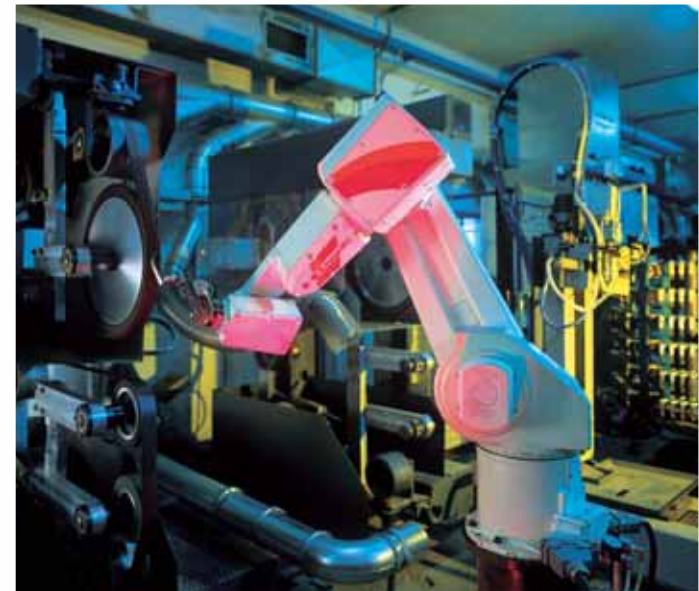

ENTRA CARRIES OUT ALL STAGES OF THE MANUFACTURING PROCESS INHOUSE, FROM THE INITIAL DESIGN TO THE FINISHED PRODUCT

Durable Finishes are applied using electrostatic lacquering, galvanic and PVD treatment, and are continuously tested

for durability in the in-house laboratory. From planning to the marketing of their product lines, each stage of the manufacturing process is handled in-house and is carefully controlled for uniformity.

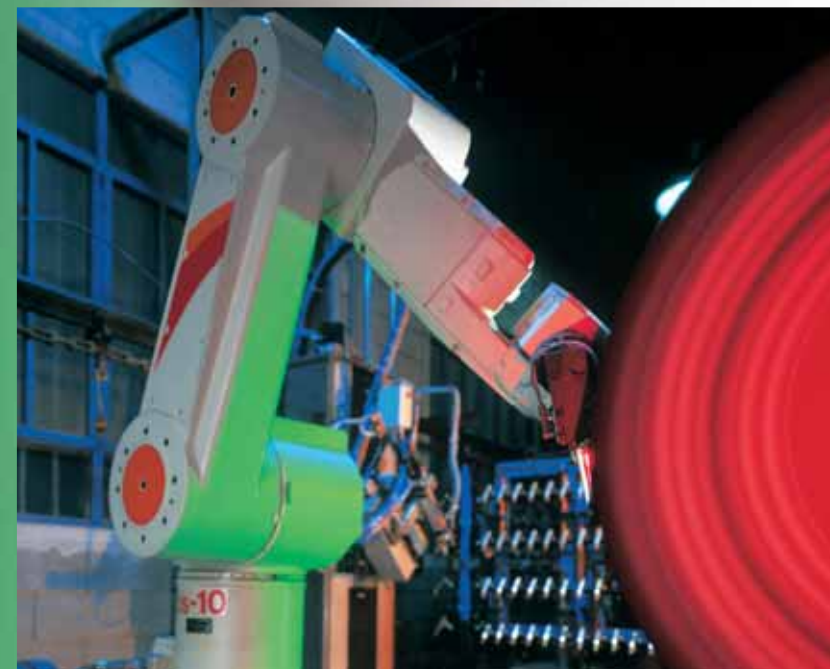

Dedication to research and development, the use of new techniques and revolutionary plant engineering are essential elements of **ENTRA's** corporate philosophy. The most advanced machinery are used throughout the manufacturing process: in

particular, fully automated robots for the polishing and grinding of pieces. This sophisticated technology automates processes that used to be done by hand. The results have been excellent, and have consistently demonstrated significantly higher levels of precision and

ENTRA'S PHILOSOPHY REVOLVES AROUND HIGH TECHNOLOGY, ROBOTICS AND QUALITY CONTROL

quality. **ENTRA's** Company Quality System is ISO 9001: 2000 certified. This commitment to quality is an on-going process. **ENTRA** aims to continuously improve its

management of staff and resources with the ultimate goal of total satisfaction for their customers.

Durability, strength and beauty. Even the most modern and functional environment needs accessories that can withstand wear and tear. Using its exclusive PVD

technology (Physical Vapour Deposition), **ENTRA** covers the surfaces of the products with a high-tech treatment which gives durability and resistance to corrosion similar to stainless steel. Door Handles and accessories such as knobs, pull-handles and security-handles treated with this state-of-the-art finish are available in various colours and protected from attack by atmospheric pollution, sunlight, humidity and will resist corrosion and abrasion for many years without changing appearance.

THE PRODUCTS WITH TITAN-INOX PROTECTION FINISH GIVE A LONG LIFE AND HIGH ABRASION RESISTANCE

Mechanical operation warranty.

The mechanical operation of our handles is guaranteed for over 10 years.

The laboratory test carried out on our return springs (over 700.000 oscillations at 72° with zero breakages) allows us to guarantee the operation for over 10 years.

AVAILABLE FINISHES ON HANDLES AND ACCESSORIES

In our catalogue we have listed the standard available finishes for every product. Our products are free from any toxic or allergic components.

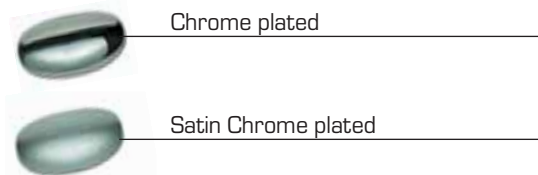

Lacquered products

These products are always protected by a transparent lacquer in order to prevent oxidation. The product is baked in an oven to ensure correct hardness of the lacquer layer. Door handles with this finish are suitable typically for internal use in buildings. For cleaning of lacquered products, use only water with a soft cloth. Avoid any contact with chemical or abrasive products.

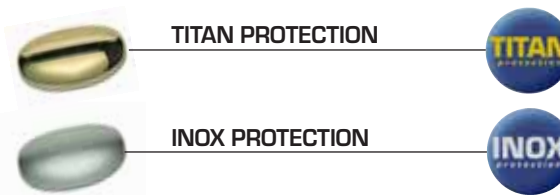

Galvanic Finish

This finish is made by a Galvanic treatment. These are very durable finishes, resisting wear, abrasion and oxidation. Door handles with these treatments are suitable for internal as well as external use. For cleaning, use water and a soft cloth or if necessary, alcohol or any low aggressive chemical cleaners. In case of external installation, cleaning every 1-2 months is recommended.

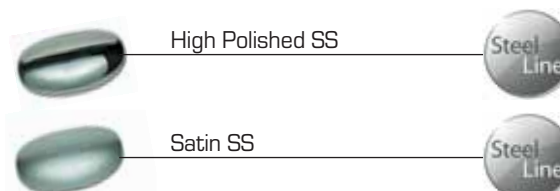

PVD Treatments (20 years warranty)

These particular finishes are applied with high technology plants and are highly resistant against wear and corrosion thanks to their surface hardness being completely abrasion free. This protective feature makes the products especially suitable for external use in "high wear" situations and is therefore also recommended for public buildings, shops, hotels, offices, etc. The products finished by this process can be guaranteed not to lose their original surface quality for in excess of 20 years. For cleaning use water and a soft cloth. If necessary also normal non abrasive Bath and Kitchen cleaners can be used. If externally installed, cleaning every 2-3 months is recommended.

Stainless Steel

Steel alloy SS304. Products made in SS are highly resistant against corrosion and abrasion. They are specifically indicated for "high wear" situations in public buildings, such as shops, hotels, offices, hospitals etc.

The new Line in Stainless Steel.

Titan Protection, the finish suitable for the harshest of environments.

The outward appearance of the brass remains unchanged. It is proof against wear and corrosion thanks to it's surface hardness being completely abrasion free. This protective feature makes the products especially suitable for external use in

normally "high wear" situations such as public buildings, shops, hotels offices, etc.

The products finished by this process can be guaranteed not to loose their brightness for excess of 20 years.

Inox Collection

Product surfaces treated with **INOX PROTECTION®** are guaranteed for at least 20 years.

An innovative development of P.V.D. (Physical Vapour Deposition) technology has enabled Eurobrass to develop this exclusive and "High Tech" colour, which is similar to

Stainless Steel. Products treated with this colouring process, fit perfectly into any modern environment which requires a durable finish with exceptional resistance to wear and abrasion. This finish is offered as standard on a complete range, and includes some handle sets and various accessories such as knobs, pull handles and safety handles.
